**AGE** : 40Y 0M 0D      **ZERO TARIFF CLIENT CODE**      **COLLECTED ON** : 21-04-2026 10:00  
**GENDER** : Male      **LAB MR#** : AAMP01479126      **RECEIVED ON** : 21-04-2026 18:04  
**OP / IP / DG #** :      **APPROVED ON** : 21-04-2026 20:03  
**REPORT STATUS** : Final Report

**Test Name**      **Result**      **Biological Ref. Interval**      **Unit**  
**Allergic Broncho-Pulmo Aspergillosis Screen Panel (Abpa-Screen) - ( Aspergillus Fumigatus- Specific Ige, Ige**

**SEROLOGY AND IMMUNOLOGY**

**Allergen, Individual - Microorganism Aspergillus Fumigatus- Specific IgE (Serum)**

Allergen, Individual - Microorganism Aspergillus      0.02      Negative: <0.1      kU/L  
Fumigatus- Specific IgE      Positive: >=0.1  
*Immucap, FEIA*

**Interpretation:**

**RESULT INTERPRETATION:**

| RESULT     | IGE LEVEL    | SYMPTOM   |
|------------|--------------|-----------|
| <0.1       | Undetectable | Unlikely  |
| 0.1 - 0.5  | Very low     | Uncommon  |
| 0.5 - 2.0  | Low          | Low       |
| 2.0 - 15.0 | Moderate     | Common    |
| 15 - 50    | High         | Common    |
| >50        | Very high    | Very high |

ImmunoCAP (Fluoroenzymeimmunoassay) (Specific IgE Test)

| Test Name   | Result | Biological Ref. Interval | Unit |
|---|--------|--------------------------|------|
| <b>Allergic Broncho-Pulmo Aspergillus Screen Panel (Abpa-Screen) - ( Aspergillus Fumigatus- Specific Ige, Ige</b> |        |                          |      |

BIOCHEMISTRY

Immunoglobulin - IgE Total - Serum (Serum)

IgE Total 85.00 <100 IU/mL  
ECLIA

Interpretation:

Immunoglobulin E (IgE) plays an important role in immunological protection against parasitic infections and in allergy (type 1 hypersensitivity). Elevated IgE concentrations can be found in patients with

- Allergic diseases such as hay fever, atopic bronchitis and dermatitis
- Non-allergic diseases, like bronchopulmonary aspergillosis, Wiskott-Aldrich syndrome, hyper-IgE syndrome, IgE myeloma, and parasitic infections etc.
- In infants and small children with recurrent respiratory tract diseases, the determination of IgE is of prognostic relevance
- Immunoglobulin E are antibodies produced by immune system. IGE plays an important role in immunological protection against parasitic infections and in allergy.
- IGE levels are elevated in patients with allergenic diseases such as hay fever, atopic bronchitis and dermatosis
- Please correlate clinically.

Disclaimer:

1. All results released pertain to the specimen as received by the lab for testing and under the assumption that the patient indicated or identified on the bill/test requisition form is the owner of the specimen.
2. Clinical details and consent forms, especially in Genetic testing, histopathology, as well as wherever applicable, are mandatory to be accompanied with the test requisition form. The non-availability of such information may lead to delay in reporting as well as misinterpretation of test results. The lab will not be responsible for any such delays or misinterpretations thereof.
3. Test results are dependent on the quality of the sample received by the lab. In case the samples are preprocessed elsewhere (e.g., paraffin blocks), results may be compromised.
4. Tests are performed as per the schedule given in the test listing and in any unforeseen circumstances, report delivery may be affected.
5. Test results may show inter-laboratory as well as intra-laboratory variations as per the acceptable norms.
